General Information

VPN stands for "Virtual Private Network". The VPN client is software that allows an encrypted, secure and authenticated connection from remote locations to the ETH network. Once the connection is established, you get an ETH Zurich IP address. Many ETH services do not recognize users with an Internet provider other than the ETH Zurich (e.g. Cablecom) as ETH members and therefore deny them access. With a VPN tunnel they are allocated an ETH internal address and are thus accepted by these services. The service is available to all ETH Zurich employees and students for free.

How to set up VPN

Windows, Mac OS & Linux

For Windows, Mac OS and Linux-based operating system we recommend the Cisco Secure Client from Cisco. This can be automatically installed from https://sslvpn.ethz.ch

For the login into https://sslvpn.ethz.ch and the configuration of Cisco Secure Client use the example given below (please replace the stars*** with your ETH user name and enter your ETH network password) 📖 More information about the ETH Network Password

⚠️ For managed computers at ETH Zurich, special VPN settings may apply. Please contact your IT support group if you have any questions.
• Login [https://sslvpn.ethz.ch](https://sslvpn.ethz.ch)

![Login Interface](image1)

**Second Password = OTP (One Time Password)**

• Cisco Secure Client configuration

Cisco Secure Client login

Password = ETH network password
Second Password = OTP (One Time Password)

Attention: Linux requires that the client be installed via shell script. This script can be downloaded from the link above. Execute the command with the command: `sudo sh /anyconnect-linux64-xxx.sh`

* The name of the script may be different depending on the current client version.

For the login into [sslvpn.ethz.ch](https://sslvpn.ethz.ch) and the configuration of Cisco Secure Client use the example given below (please replace the stars*** with your ETH user name and enter your ETH network password) 📚 More information about the ETH Network Password
• Login https://sslvpn.ethz.ch

• Cisco Secure Client configuration
- Cisco Secure Client login

Second Passwort = OTP (One Time Passwort)

Attention: Linux requires that the client be installed via shell script. This script can be downloaded from the link above. Execute the command with the command:

```
sudo sh /anyconnect-linux64-xxx.sh
```

* The name of the script may be different depending on the current client version.

iOS & Android

Please use the Cisco Secure Client from the [AppStore (iOS)](https://apps.apple.com) or [Play Store (Android)](https://play.google.com).

Configuration of the VPN connection
When using the application for the first time, you need to configure the VPN connection.

- Please click on "No connection" to add a new connection.
- Enter any description for the connection.
- Set as server address: sslvpn.ethz.ch/staff-net
- Click on Save
• Click on "Allow"

• Activate the button at "AnyConnect-VPN" to start a connection setup
- Enter your eth user name as follows: eth_username@staff-net.ethz.ch
- Use your ETH network password as your password. More information about the ETH Network Password

Configuration of the VPN connection
When using the application for the first time, you need to configure the VPN connection.

- Please click on "Connection" "Add new VPN Connection" to add a new connection.

- Enter any description for the connection.
- Set as server address: sslvpn.ethz.ch/staff-net
- Click on Finish

- Activate the button at "AnyConnect-VPN" to start a connection setup
• Enter your ETH user name as follows: `eth_username@staff-net.ethz.ch`
• Use your ETH network password as your password. More information about the ETH Network Password

Please use the **Cisco Secure Client** from the **AppStore (iOS)** or **Play Store (Android)**.

**Configuration of the VPN connection**

When using the application for the first time, you need to configure the VPN connection.

• Please click on "No connection" to add a new connection.
• Enter any description for the connection.
• Set as server address: sslvpn.ethz.ch/student-net
• Click on Save

Click on "Allow"
- Activate the button at "AnyConnect-VPN" to start a connection setup.

- Enter your eth user name as follows: `eth username@student-net.ethz.ch`.

- Use your ETH network password as your password. More information about the ETH Network Password.
