VPN stands for "Virtual Private Network". The VPN client is software that allows an encrypted, secure and authenticated connection from remote locations to the ETH network. Once the connection is established, you get an ETH Zurich IP address. Many ETH services do not recognize users with an Internet provider other than the ETH Zurich (e.g. Cablecom) as ETH members and therefore deny them access. With a VPN tunnel they are allocated an ETH internal address and are thus accepted by these services. The service is available to all ETH Zurich employees and students for free.

How to set up VPN

Windows, Mac OS & Linux

For Windows, Mac OS and Linux-based operating system we recommend the AnyConnect VPN Client from Cisco. This can be automatically installed from https://sslvpn.ethz.ch

For the login into https://sslvpn.ethz.ch and the configuration of Cisco AnyConnect use the example given below (please replace the stars*** with your ETH user name and enter your ETH network password) 🌟 More information about the ETH Network Password

⚠️ For managed computers at ETH Zurich, special VPN settings may apply. Please contact your IT support group if you have any questions.
• Login https://sslvpn.ethz.ch

![Login Window]

Bitte geben Sie Benutzernamen und Passwort ein.

Gruppe: staff-net
Benutzername: ****@staff-net.ethz.ch
Password: ************

Login

• Cisco AnyConnect configuration

![Cisco AnyConnect Secure Mobility Client]

VPII: Ready to connect.

sslvpn.ethz.ch/staff-net
Connect

• Cisco AnyConnect login

![Cisco AnyConnect Secure Mobility Client]

Bitte geben Sie Benutzernamen und Passwort ein.

Username: ****@staff-net.ethz.ch
Password: ************

Fuer eine Verbindung in die entsprechende VPN-Gruppe (VPZ) muss beim Feld "Connect to" "sslvpn.ethz.ch/VPZ_NAME" eingegeben werden, beim Feld Benutzername "Benutzername=REALM.ethz.ch" => Aktuell ist student-net selektiert => Login: username@student-net.ethz.ch

OK Cancel
Attention: Linux requires that the client be installed via shell script. This script can be downloaded from the link above. Execute the command with the command: sudo sh ./anyconnect-linux64-xxx.sh

* The name of the script may be different depending on the current client version.

For the login into https://sslvpn.ethz.ch and the configuration of Cisco AnyConnect use the example given below (please replace the stars*** with your ETH user name and enter your ETH network password) 🗝 More information about the ETH Network Password
- Login [https://sslvpn.ethz.ch](https://sslvpn.ethz.ch)

- Cisco AnyConnect configuration

- Cisco AnyConnect login
Attention: Linux requires that the client be installed via shell script. This script can be downloaded from the link above. Execute the command with the command: 

```
sudo sh ./anyconnect-linux64-xxx.sh
```

* The name of the script may be different depending on the current client version.

iOS & Android

Please use the [Cisco AnyConnect](https://appstore.com/cisco) from the [AppStore (iOS)](https://appstore.com/cisco) or [Play Store (Android)](https://playstore.com/cisco).

**Configuration of the VPN connection**

When using the application for the first time, you need to configure the VPN connection.

- Please click on "No connection" to add a new connection.
• Enter any description for the connection.
• Set as server address: sslvpn.ethz.ch/staff-net
• Click on Save
- Activate the button at "AnyConnect-VPN" to start a connection setup
- Enter your ETH user name as follows: `eth_username@staff-net.ethz.ch`
- Use your ETH network password as your password. [More information about the ETH Network Password]
When using the application for the first time, you need to configure the VPN connection.

- Please click on "Connection" "Add new VPN Connection" to add a new connection.

- Enter any description for the connection.
- Set as server address: ssvpn.ethz.ch/staff-net
- Click on Finish

- Activate the button at "AnyConnect-VPN" to start a connection setup
Please use the **Cisco AnyConnect** from the **AppStore (iOS)** or **Play Store (Android)**.

**Configuration of the VPN connection**

When using the application for the first time, you need to configure the VPN connection.

- Please click on "No connection" to add a new connection.
• Enter any description for the connection.
• Set as server address: sslvpn.ethz.ch/student-net
• Click on "Allow"
• Activate the button at "AnyConnect-VPN" to start a connection setup.

Enter your ETH user name as follows: **eth_username@student-net.ethz.ch**

Use your ETH network password as your password. More information about the ETH Network Password.

Configuration of the VPN connection.
When using the application for the first time, you need to configure the VPN connection.

- Activate the button at "AnyConnect-VPN" to start a connection setup
**General settings for Native Clients (limited support)**

- **Server:** `sslvpn.ethz.ch`
- **Account/Login:** ETH user `name@staff-net.ethz.ch` or ETH user `name@student-net.ethz.ch`
- **Password:** ETH network password
- **Group name:** staff-net or student-net
- **Group password/Shared Secret:** The secret group password can be found here [Click here](#)
- **Certificate:** None/Not active

⚠️ Please note that the VPN client integrated in **Windows** does **not** work with our VPN.

Note that on some **Android** versions, the VPN client of the OS itself does **not** work.

Likewise, the **VPNC** client cannot be used under **Linux**. **OpenConnect** can be used as an alternative.
